

Blood Vessel IT Security System

Desktop Model

Protect information with your single finger!!

The unique image of the single finger blood vessel pattern is recorded, using a CCD camera with near infrared ray. The image is then matched to a previously registered template to make an instantaneous and accurate determination of a person's identity.

- **High-Level Security**
- **User Friendly**

SpooF Free

The template of blood vessel pattern is the internal information of the live body and it is almost impossible to be forged.

One touch Lock Function

Press one hot key to lock your computer and scan your finger to unlock it.

File & folder encryption

Scan your finger to encrypt your files & folders to prevent unauthorized person from the illegal access.

Works with Screen Saver

Unlock screen saver with your finger.

Log Administration

You can track the log, saved in CSV format.
